

Forma – Radio-frequency

Improve the skin's overall appearance with smoother skin and a more radiant glow. Forma uses the latest Radio-Frequency technology to stimulate the formation of new collagen and to improve skin elasticity. It will reduce wrinkles and sagging skin. By heating the skin up to 40° - 43°C with the Radio-Frequency energy, the collagen fibres in the dermal layer will be stimulated.

HOW DOES FORMA WORK?

Forma was developed based on the clinical success of the proprietary A.C.E. (Acquire, Control, Extend) technology. A.C.E. technology uses radio-frequency energy to target deep layers of the skin, with no area being under or over treated. This ensures maximum and consistent results.

Forma is suitable for all skin types and is appropriate for individuals seeking a non-invasive and a natural looking approach to improvements in skin tone and texture irregularities. Patients have reported that their skin feels smoother and more defined, with a reduction in wrinkles.

Forma can be used on both the face and body. Commonly treated areas on the face include: forehead, crows feet, upper eyelids, lower eyelids, nasolabial folds, jowls, smile lines and neck. On the body, popular treatments consist of the arms (bat wings), abdomen and other areas that may need contraction.

Forma is an essentially painless procedure with no downtime due to its precise technology and deep-layer targeting of the skin. Slight redness in the treatment area is common post-procedure, which subsides within a few hours.

HOW MANY SESSIONS ARE REQUIRED & CAN IT USED WITH OTHER TREATMENTS?

It is recommended that weekly sessions are performed over a six-week period. Individuals with mild laxity may be treated in fewer sessions with more weeks between each treatment. Scheduling should be based on a medical pre-evaluation.

Forma can be used in combination with most other laser treatments, facials, injectables and/or filler. Please speak to your aesthetic provider when considering combining Forma with other treatments.

Treatment Overview

Procedure Time
30 Minutes

Discomfort Level
None

Anaesthetic
None

Recovery Time
None

Final Results
A few months after
course is complete

Duration of Results
Varies
